

## Private Care

# Specialist aged health care tailored to individual needs

## Keeping people happily living at home longer

### What is Private Care?

Private Care is individually designed to provide tailored support for older people and people living with dementia. The service can be provided seven days a week including evenings if required.

Private Care also provides clients with the opportunity to receive care above and beyond what can be provided through a government subsidised service. Support includes social outings, personal care, home help, medication assistance, shopping, respite and transport.

We can also support participation in rehabilitation or exercise programs including hydrotherapy. Private Care is often requested following a hospital stay. Overnight Private Care means you can have help and support overnight in your own home.

### How can HammondCare At Home Help?

HammondCare At Home has significant experience in supporting people in their own homes with Private Care and is an industry leader in caring for people living with dementia.

Our clients are supported by an experienced Care Manager and specialist care workers.
